

JÉRÉMY DO NASCIMENTO MIGUEL

Université de Namur, CRED · Last update: September 17, 2026

8 du Rempart de la Vierge, 5000 Namur, Belgium • [jeremy\[dot\]donascimento\[at\]unamur.be](mailto:jeremy[dot]donascimento[at]unamur.be) • jdnmiguel.github.io

CURRENT POSITION

University of Namur — Assistant Professor (Chargé de Cours)	2026–
IPORA — Researcher	2025–

PAST EXPERIENCE

Bordeaux School of Economics — Post-doctoral Researcher	2025–2026
Addis Ababa University — Visiting Researcher	2025–2026
IFPRI — Short-term Consultant	2024
NOVA SBE – NOVAfrica — Visiting Researcher	Spring 2025

DOCTORAL STUDIES

Bordeaux School of Economics, Université de Bordeaux	PhD in Economics, Fall 2024
<i>Dissertation:</i> “Grades and Standards for African Farmers”	
<i>Advisor:</i> Tanguy Bernard	
<i>Thesis committee:</i> Lauren Falcao Bergquist, Tessa Bold, Sylvie Lambert, and Quentin Stoeffler.	
Fulbright Visiting Scholar, UC Berkeley	2022–2023
<i>Sponsors:</i> Alain de Janvry and Elisabeth Sadoulet	
Visiting Scholar, University of Georgia	Fall 2021
<i>Sponsor:</i> Nicholas Magnan	
Primary Fields: Development and Agricultural Economics	
Secondary Fields: Applied Econometrics

PRIOR EDUCATION

University of Bordeaux — M.Sc. Development Economics and Applied Statistics	2019
University of Bordeaux — B.A. Economics and Law	2017

TEACHING

Université de Namur	
• <i>Introduction to Econometrics</i> (Undergraduate), Lead Instructor	2026–
• <i>Environmental Economics</i> (Undergraduate), Lead Instructor	2026–
Addis Ababa University	
• <i>Introduction to R and ML</i> (Graduate), Lead Instructor with Mathilde Col	2026
Université de Bordeaux	

• <i>Introduction to Stata</i> (Graduate), Lead Instructor	2024
• <i>Microeconomics</i> (Undergraduate), TA for Ion Lapteacru	2024
• <i>Economic Issues in Africa</i> (Graduate), Lead Instructor with Eric Rougier	2023
• <i>Machine Learning for Policy Evaluation</i> (Graduate), Lead Instructor	2023
• <i>Causal Inference I</i> (Graduate), TA for Tanguy Bernard	2021, 2022 & 2024
IFPRI – Ethiopia	
• <i>Machine Learning for Policy Evaluation</i> , Lead Instructor	2023

GRANTS, FELLOWSHIPS & AWARDS

Marie Skłodowska-Curie Postdoctoral Fellowship, IIES – Stockholm University (€252,000) — <i>Declined</i>	2026
IGC (£75,000); Fund for Innovation in Development (€1.5 million)	2025
IGC Pilot Grant (£40,000)	2023
Fulbright Fellowship (\$24,500)	2022

RESEARCH PAPERS

“The Double Edge Sword of Social Transfers: Evidence from Ethiopia” (*Job Market Paper*)

This article examines how cash versus in-kind transfers affect local economies using Ethiopia’s Productive Safety Net Program (PSNP), Africa’s largest social protection program. Exploiting the progressive nationwide roll-out and using a staggered difference-in-differences approach, I analyze impacts on local prices and market adjustments from 2001–2015 to identify causal effects. Cash transfers increase local prices by 5%, while in-kind transfers show no significant average price effects; prices of the items distributed fall significantly in localities receiving in-kind transfers. Effects are strongest in districts with higher treatment intensity, more isolated, and with lower initial agricultural productivity. A one percentage point increase in transfer share drives a 1.02% price increase in cash-dominant districts versus a 0.82% decrease in food-dominant districts. Several mechanisms explain these differential effects: cash transfers relax supply constraints by improving agricultural productivity through increased fertilizer application, partially offsetting price inflation, while market power among suppliers and limited market access amplify price effects in cash-receiving areas. The resulting price increases entail welfare costs: children under five show higher rates of underweight and wasting in cash-dominant districts. These findings highlight the importance of tailoring social protection program design to local market conditions and considering transfer modality when scaling up interventions.

“Experimental Design for Encouraging the Adoption of Aflasafe among Small-Scale Farmers in Nigeria.” with T. Bernard, Y. Liu, and T. Wossen. [SPIA presentation]

Price subsidies are among the most common public policies for raising adoption of agricultural technologies in Africa, but their design is almost always reduced to a single question: how deep a discount to offer. We ask instead whether the structure of a subsidy schedule, holding fiscal cost fixed, can steer adoption toward specific adoption margins, and in particular those that generate positive externalities. We study Aflasafe, a biological control that cuts aflatoxin contamination in maize by over 80%: because contamination is invisible to buyers and can only be tested at high fixed cost, smallholder farmers treating market-bound maize are typically not rewarded for the health benefits their treatment confers on others. In the second of a two-season randomized experiment with 2,121 smallholders across 92 villages in Niger State, Nigeria, we compare a flat 50% subsidy to a fiscally equivalent non-linear (“buy half, get half free”) schedule. The non-linear schedule raises full-field adoption by 15.2 percentage points while the equally generous flat subsidy moves it essentially to zero; a cash transfer amplifies the non-linear effect by a further 15.4 pp but has no comparable effect under flat pricing, so liquidity and schedule structure are complements for the externality-generating margin. A simple framework in which farmers value their own health above anonymous others’ rationalizes the pattern, and among cash recipients baseline altruism is associated with externality-margin adoption. A cost-benefit and targeting analysis favors the non-linear schedule on that margin. Because the contrast is identified from variation within villages, a uniform village-wide rollout, under which secondary markets could erode the advantage, is the natural next step.

“Market-Driven Value Chain Development: An Evaluation of Ethiopia’s Agricultural Commercialization Cluster Program.” with G. T. Abate and J. Bloem.

Agricultural commercialization among smallholder farmers in sub-Saharan Africa remains constrained by persistent market failures in both input and output markets. We evaluate Ethiopia’s Agricultural Commercialization Cluster program that implements a bundled approach of linking farmers with agribusinesses, service providers, and financial institutions on the input side and expanding opportunities for value addition and improved access to buyers on the output side. With a difference-in-differences estimation approach, we compare outcomes with three rounds of panel data between three distinct groups of households in our data determined by the confluence of program implementation and household cultivation locations. We estimate increased intensive margin measures of commercialization among farmers in ACC production clusters with meaningful effects on nearby farmers within ACC *woredas*. We also find evidence of increased

income and improvements on the output side (i.e., greater maize and wheat yields and better market access) rather than on the input side (i.e., improved agricultural practices or input use). Income gains are concentrated among lower-income farmers, highlighting converging income dynamics.
